

Introducing PUI Audio's Full Range Point-Source Speakers

PUI Audio's all-new Full Range, Point-Source Speakers are designed for audio applications where maximum output and high resolution response are required. Both designs cover more than 85% of the entire audio band!

The 66.8mm square, flat panel [AS06004PS-R](#) and [AS06008PS-R](#) speakers not only pack maximum punch into a speaker that measures only 26.5mm high, they also exhibit extremely flat off-axis response out to 20 kHz.

Choose the 4 ohm or 8 ohm version and experience sustained high fidelity output (from 150 Hz to 20 kHz) of up to 92 dB from 1 meter away due to their 10W continuous power handling.

The 92mm diameter [AS09208AR-R](#) is truly a jack-of-all trades. Not only does this speaker offer top-notch musicality and vocal performance, it performs fantastically providing real bass response down to 60 Hz — in a variety of enclosures!

Up to 94 dB of output at 1 meter away is available, and this speaker is weather resistant due to its anodized aluminum cone, steel frame, and rubber surround.
